

# Making things: productively

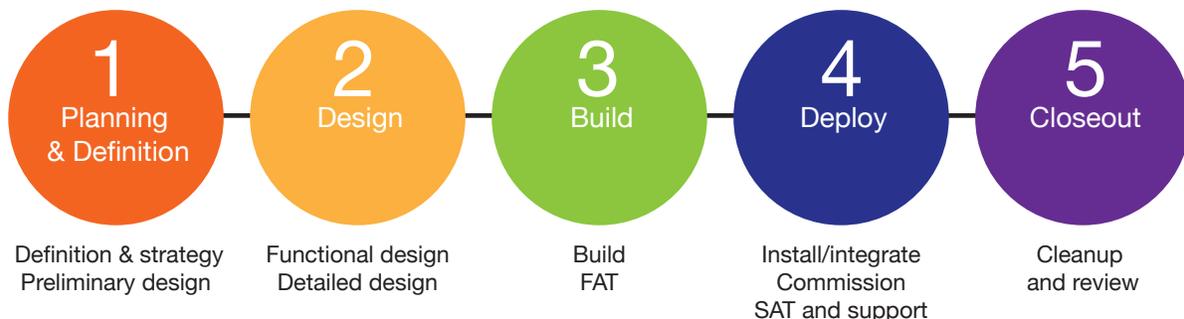

Small and medium manufacturers (SMMs) have been the least likely to take advantage of the potential benefits of automation technology. Often times it is difficult to know where to start and the scope of investment required can seem daunting.

Fortunately, small, targeted improvements can have a big impact on your business. By identifying where automation will provide the greatest return and taking a strategic approach to innovation, SMMs can invest in technology and achieve the benefits over time.

## Delivering automation through a design-centric approach

JAE Automation takes a design-centric approach to automation technology. This means that we understand your entire production process and find the machines, systems, or processes that will see the biggest benefit from automation. We take the time to learn your business strategy and ensure that all solutions align with your objectives.

In this way, we're not just a systems integrator. We work alongside you to make your business better.

## Working with a trusted partner

Our experienced team of automation experts bring the knowledge and vision of what's possible to your facility. Through this collaborative approach, we work to become a trusted partner that you can turn to for all your technology requirements.

### Expertise in

- Automation Consulting
- Electrical Control Design
